**Subject:** RM Question

Hey Chris,

I am wondering about the description of the location for the following station in your Captina WQ report:

**CAPTINA CREEK JUST DST PERKINS RUN**

Site Location: **DST**. River Mile: 22.4

According to the data we got from your agency that Milo mapped out, this station is above, not below, Perkins Run. There is also a sampling station at RM 22.1 which the data does show to be below Perkins, but chemistry data was also collected at RM 22.4. (22.4 was not shown on the map at the front of the main report, I assume because biology was not sampled there?)

It's not a big deal, but if you can confirm that 22.4 is above Perkins (and below Piney), that would be much appreciated. Thanks!

Pete
